Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 7619, Application US/10138674

Fublication No. US20040077565A1

GENERAL INPORMATION:

APPLICANT: Ribozyme Pharmaceuticals, Inc.

APPLICANT: Rocobedo, Jame

APPLICANT: Stinchcomb, Dan

APPLICANT: Stinchcomb, Dan

APPLICANT: Stinchcomb, Dan

TITLE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions Rel

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor

FILE REFERENCE: MEHBOO-876-N (400/049)

CURRENT APPLICATION NUMBER: US/10/138,674

CURRENT FILING DATE: 2002-05-03

NUMBER OF SEQ ID NOS: 2002-05

SOFTWARE: Patentin version 3.0

Sequence 1569, Application US/10712672

Sequence 1569, Application US/10712672

Publication No. US20040102413A1

GENERAL INFORMATION:
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: Biologue, Jim
APPLICANT: Stinchomb, Dan
TITLE OF INVENTION: Method and Reagent for the Inhibition of Telomerase Enzyme
TITLE OF INVENTION: Method and Reagent for 2003-11-13
FILE REFERENCE: MBH500-882-C (400/019)
CURRENT APPLICATION NUMBER: US/10/712,672
CURRENT PILING DATE: 2000-11-13
PRIOR FILING DATE: 2000-04-14
PRIOR FILING DATE: 2000-04-14
PRIOR FILING DATE: 1999-08-31
PRIOR FILING DATE: 1999-08-31

PRIOR APPLICATION NUMBER: 60/150,713

PRIOR FILING DATE: 1999-08-31

NUMBER OF SEQ ID NOS: 5586

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                US-09-230-301-4/.

Sequence 47 Application US/09238351

Patent No. US20202006643A1

GENERAL INFORMATION:
APPLICANT: Bamdad, Cyntha

ITILE OF INVENTION: Amplification of Nucleic Acids with Electronic

TITLE OF INVENTION: Detection of Nucleic Acids with Electronic

TITLE OF INVENTION: Detection of Nucleic Acids with Electronic

TITLE OF INVENTION: Detection of Nucleic Acids with Electronic

TITLE OF INVENTION: Detection OF Nucleic Acids with Electronic

TITLE OF INVENTION: Detection OF Nucleic Acids with Electronic

TITLE OF INVENTION UNBER: US/09/238,351

CURRENT APPLICATION NUMBER: 09/014,304

EARLIER FILING DATE: 1998-01-27

EARLIER APPLICATION NUMBER: 60/034,011

EARLIER APPLICATION NUMBER: 60/084,509

EARLIER FILING DATE: 1998-05-06

EARLIER FILING DATE: 1998-05-06

EARLIER FILING DATE: 1998-05-06

EARLIER FILING DATE: 1998-03-16

NUMBER OF SEQ ID NOS: 83

SOFTWARE: PatentIN Ver. 2.0

                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 59, Application US/09238351
Patent No. US20020006643A1
GENERAL INFORMATION:
APPLICANT: RAYPAN
TITLE OF INVENTION: Amplification of Nucleic Acids with Electronic TITLE OF INVENTION: Detection
FILE REFERENCE: A67643/RFT/RMS
FILE REFERENCE: A67643/RFT/RMS
CURRENT FILING DATE: 1999-01-27
CURRENT FILING DATE: 1999-01-27

Patent No. US20010007985A1
GENERAL INFORMATION:
APPLICANT: Rothberg, Jonathan
APPLICANT: Suppen, John
TITLE OF INVENTION: Glassification of DNA Sequences in a Sample Without
TITLE OF INVENTION: Sequencing
NUMBER OF SEQUENCES: 59
CORRESPONDENCE ADDRESS:
ADDRESSEE: Permie and Edmonds
STREET: 1155 Avenue of the Americas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-10-001-670-78

Sequence 78, Application US/10001670

Sequence 78, DS20030119002A1

GENERAL INFORMATION:

APPLICANT: Nandabalan, Krishnan

APPLICANT: Rothberg, Jonathan

TITLE OF INVENTION: IDENTIFICATION AND COMPARISON OF PROTEIN-PROTEIN

TITLE OF INVENTION: IDENTIFICATIONS THAT OCCUR IN POPULATIONS AND

TITLE OF INVENTION: IDENTIFICATION OF INHIBITORS OF THESE INTERACTIONS

FILE REFERENCE: 7934-087

AZ972315.1 GI:13843542 GSS. VERSION KEYWORDS SOURCE ORGANISM DEFINITION REFERENCE AUTHORS JOURNAL COMMENT RESULT 1 AZ972315 LOCUS ACCESSION TITLE

Laboratory Mouse DNA Resource
(http://www.jax.org/resources/documents/dhares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polymucleotide kinase. Adaptor or oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coll XL10-GG1d (Stratagene) cells
and selected for ampicillin resistance." US-08-849-021-31/C
; Sequence 31, Application US/08849021
; Patent No. 5955276
; GENERAL INFORMATION:
APPLICANT: MORGANTE, MICHELE
APPLICANT: MORGANTE, JULIE M.
TITLE OF INVENTION: COMPOUND MICROSATELLITE
TITLE OF INVENTION: PRIMERS FOR THE
TITLE OF INVENTION: DETECTION OF GENETIC
TITLE OF INVENTION: POLYMORPHISMS
NUMBER OF SEQUENCES: 89
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FEATURE:

MOLECULE TYPE: other nucleic acid
US-08-574-396-44
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 23, Application US/08544381B Patent No. 6027880
```

```
TYPE: DNA
ORGANISM: Artificial Sequence
FEATURE:
OTHER INFORMATION: Synthetic Ribozyme or portion thereof
FEATURE:
OTHER INFORMATION: Description of Artificial Sequence: Ribozymes and
OTHER INFORMATION: portions thereof
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Jos-U8-778-794A-81/c

Sequence 81, Application US/08778794A

Patent No. 6309823

GENERAL INFORMATION:
APPLICANT: Miyeda, Charles Garrett
APPLICANT: Miyeda, Charles Garrett
APPLICANT: Chee, Mark
APPLICANT: Chee, Mark
APPLICANT: Hubbell, Earl A.
APPLICANT: Lightur, Robert J.
APPLICANT: Lightur, Robert J.
APPLICANT: Lobban, Peter B.
APPLICANT: Lobban, Beter B.
APPLICANT: Sheldon, Edward L.
APPLICANT: Morris, MacDonald S.
APPLICANT: Morris, MacDonald S.
APPLICANT: Morris, MacDonald S.
APPLICANT: Sheldon, Edward L.
TITLE OF INVENTION: Arrays of Nucleic Acid Probes
TITLE OF INVENTION: Arrays of Nucleic Acid Probes
TITLE OF INVENTION: Arrays of Nucleic Acid Probes
TITLE OF INVENTION: For Analyzing Biotransformation Genes
NUMBER OF SEQUENCES: 156
CORRESCED ADDRESS:
ADDRESSE: Two Enhancadero Center, Eighth Floor
SITRE CANTER 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CITY: SAN FIRECOS

                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 44, Application US/09306653
Patent No. 6600026
GENERAL INFORMATION
APPLICANT: Bandad, Cynthia C.
APPLICANT: Yu, Changjun
TITLE OF INVENTION: Electronic Methods for the Detection of Analytes
TITLE OF INVENTION: Utilizing Monolayers
FILE REFERENCE: A66343-IKRT/RMS
CURRENT APPLICATION NUMBER: US/09/306,653
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ; OTHER INFORMATION: Description of Artificial Sequence: synthetic US-09-306-653-42
